

Comprehensive Make.com Course

Beginner to Advanced Automation Training

Module 1: Introduction to Make.com

This module provides detailed instruction on module 1: introduction to make.com. Study the concepts, complete practical exercises, and build example scenarios.

- What Make.com is
- Automation concepts
- Scenarios, modules, operations
- Use cases and architecture

Module 2: Building Your First Scenario

This module provides detailed instruction on module 2: building your first scenario. Study the concepts, complete practical exercises, and build example scenarios.

- Triggers and actions
- Connecting apps
- Running and testing scenarios

Module 3: Data Mapping

This module provides detailed instruction on module 3: data mapping. Study the concepts, complete practical exercises, and build example scenarios.

- Bundles
- Variables
- Data transformation
- Best practices

Module 4: Routers and Filters

This module provides detailed instruction on module 4: routers and filters. Study the concepts, complete practical exercises, and build example scenarios.

- Conditional logic
- Branching workflows
- Complex routing

Module 5: Functions and Data Processing

This module provides detailed instruction on module 5: functions and data processing. Study the concepts, complete practical exercises, and build example scenarios.

- Text functions
- Date functions
- Math functions
- JSON handling

Module 6: Iterators and Aggregators

This module provides detailed instruction on module 6: iterators and aggregators. Study the concepts, complete practical exercises, and build example scenarios.

- Processing arrays
- Aggregation patterns
- Common mistakes

Module 7: Error Handling

This module provides detailed instruction on module 7: error handling. Study the concepts, complete practical exercises, and build example scenarios.

- Retries
- Break directives
- Fallback flows
- Monitoring

Module 8: Webhooks

This module provides detailed instruction on module 8: webhooks. Study the concepts, complete practical exercises, and build example scenarios.

- Custom webhooks
- Instant triggers
- Webhook security

Module 9: APIs and HTTP Module

This module provides detailed instruction on module 9: apis and http module. Study the concepts, complete practical exercises, and build example scenarios.

- REST APIs
- Authentication
- Pagination
- Rate limits

Module 10: Data Stores

This module provides detailed instruction on module 10: data stores. Study the concepts, complete practical exercises, and build example scenarios.

- Persistent storage
- Caching
- Lookup tables

Module 11: AI Integrations

This module provides detailed instruction on module 11: ai integrations. Study the concepts, complete practical exercises, and build example scenarios.

- OpenAI integration

- Prompt design
- AI workflows

Module 12: Business Automations

This module provides detailed instruction on module 12: business automations. Study the concepts, complete practical exercises, and build example scenarios.

- CRM
- Marketing
- Support
- Finance automations

Module 13: E-Commerce Automations

This module provides detailed instruction on module 13: e-commerce automations. Study the concepts, complete practical exercises, and build example scenarios.

- Orders
- Inventory
- Customer notifications

Module 14: Advanced Design Patterns

This module provides detailed instruction on module 14: advanced design patterns. Study the concepts, complete practical exercises, and build example scenarios.

- Event-driven workflows
- Reusable components
- Scaling

Module 15: Deployment and Governance

This module provides detailed instruction on module 15: deployment and governance. Study the concepts, complete practical exercises, and build example scenarios.

- Security
- Versioning
- Documentation
- Auditing

Module 16: Certification Preparation

This module provides detailed instruction on module 16: certification preparation. Study the concepts, complete practical exercises, and build example scenarios.

- Practice questions
- Scenario design exercises

Module 17: Capstone Projects

This module provides detailed instruction on module 17: capstone projects. Study the concepts, complete practical exercises, and build example scenarios.

- Lead generation system
- AI content workflow
- E-commerce automation
- Customer support automation
- ERP integration

Module 18: Troubleshooting Guide

This module provides detailed instruction on module 18: troubleshooting guide. Study the concepts, complete practical exercises, and build example scenarios.

- Debugging techniques
- Performance optimization
- Common issues

Module 19: Best Practices

This module provides detailed instruction on module 19: best practices. Study the concepts, complete practical exercises, and build example scenarios.

- Naming conventions
- Error resilience
- Maintainability

Module 20: Career & Freelancing with Make.com

This module provides detailed instruction on module 20: career & freelancing with make.com. Study the concepts, complete practical exercises, and build example scenarios.

- Portfolio building
- Client projects
- Automation consulting

Suggested Practical Projects

- Lead capture to CRM with qualification scoring
- AI-powered email generation and approval workflow
- Invoice processing with OCR and accounting integration
- Customer support ticket triage using AI
- E-commerce order fulfillment automation
- Social media content publishing pipeline
- Multi-step approval workflow
- Business reporting dashboard automation
